Colour Television TX-21S3T TC-21S3R Z-7 Chassis

Specifications

Power Source :	220-240V AC, 50Hz	RCA IN	Video 1V p-p 75Ω
		RCA IN	Audio 500mV rms, 10KΩ
Power Consumption :	50W	High Voltage :	27kV + 0.7kV / - 1kV (zero beam current)
Standby Power Consumption :	1W	Picture Tube :	A51 ESF43X191 51 cm V 90° measured diagonally
Aerial Impedance :	75Ω unbalanced, Coaxial Type	Audio Output :	
Receiving System :	PAL-I (UHF), PAL-525/60, NTSC (AV Only)	Speaker	6 W (Music Power) 8 Ω Impedance
Receiving Channels :	UHF E21 - E69	Headphones	8 Ω Impedance
Intermediate Frequency :		Accessories supplied :	Remote Control 2 x R6 (UM3) Batteries TV Stand AV Cover
Video	39.5 MHz	Dimensions :	
Sound	33.5 MHz	Height :	480 mm
Colour	35.07 MHz	Width :	520 mm
		Depth :	485 mm
Video / Audio		Net Weight :	20kg
Terminals :			
AV1 IN	Video (21 pin) 1V p-p 75Ω Audio (21 pin) 500mV rms 10kΩ RGB (21 pin)		
AV1 OUT	Video (21 pin) 1V p-p 75Ω Audio (21 pin) 500mV rms 1kΩ		

Specifications are subject to change without notice.
Weight and dimensions shown are approximate.

IMPORTANT

This receiver uses a **HOT** chassis, after service please ensure that the chassis is returned to its correct position.
Particular care being taken to the position of the customer controls.
Failure to do so could endanger customer safety.

SAFETY PRECAUTIONS

GENERAL GUIDE LINES

1. It is advisable to insert an isolation transformer in the AC4. supply before servicing a hot chassis.
2. When servicing, observe the original lead dress in the high5. voltage circuits. If a short circuit is found, replace all parts which have been overheated or damaged by the short 6. circuit.
3. After servicing, see that all the protective devices such as insulation barriers, insulation papers, shields and isolation R—C combinations are correctly installed.
4. When the receiver is not being used for a long period of time, unplug the power cord from the AC outlet.
5. Potentials as high as 28kV are present when this receiver is in operation. Operation of the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by anyone who is not familiar with the precautions necessary when working on high voltage equipment. Always discharge the anode of the picture to the chassis before handling the tube.
6. After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazards.

Check each exposed Metallic part and check the voltage at each point.

Reverse the AC plug at the outlet and repeat each of the above measurements.

The potential at any point should not exceed 1.4 Vrms. In case a measurement is outside the limits specified, there is a possibility of a shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

HOT CHECK CIRCUIT

Fig.1

LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs of the plug.
2. Turn on the receiver's power switch.
3. Measure the resistance value with an ohmmeter, between 1. the jumpered AC plug and each exposed metallic cabinet part on the receiver, such as screw heads, 2. aerials, 2. connectors, control shafts etc. When the exposed metallic part has a return path to the chassis the reading should be between 4M ohm and 20M ohm. When the exposed metal does not have a return path to the chassis the reading must be infinite.

X—RADIATION WARNING

The potential sources of X—Radiation in TV sets are the high voltage section and the picture tube.

When using a picture tube test jig for service ensure that the jig is capable of handling 28kV without causing X—Radiation.

NOTE : It is important to use an accurate periodically calibrated high voltage meter

LEAKAGE CURRENT HOT CHECK

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a 2k Ω 10W resistor in series with an exposed metallic part on the receiver and an earth such as a water 3. pipe.
3. Use an AC voltmeter with high impedance to measure the potential across the resistor.

1. Set the brightness to minimum.

2. Measure the high voltage. The meter should indicate 27kV + 0.7 / – 1kV if the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

To prevent any X—Radiation possibility, it is essential to use the specified tube.

SERVICE HINTS

HOW TO REMOVE THE REAR COVER

1. Remove the 5 screws (A) as shown in Fig.2/Fig.3.

Fig. 2

HOW TO MOVE THE CHASSIS INTO THE SERVICE POSITION

1. Hold and lift the rear of the E – PCB chassis and gently pull the chassis toward you.
2. Release the respective wiring clips and rotate the chassis clockwise, moving the EHT lead around the left side of the CRT neck.
3. Slide the lower edge of the chassis into the power cable holder case whilst sliding the upper edge of the board into the chassis holding block.
4. After servicing ensure all wiring is returned to its original position before returning the receiver to the customer.

ALIGNMENT SETTINGS

1. Select program position 60 and set the sharpness to minimum.
2. Press the Off Timer button on the remote control and at the same time press the V (down) button on the customer controls at the front of the TV, this will place the TV into Service Mode.
3. Press the Δ / ∇ buttons to step up / down through the functions.
4. Press the + / – buttons to alter the function values.
5. Press the STORE button after each adjustment has been made to store the required values.
6. To exit Service Mode press the Normalisation button.

NOTE : The figures used below are nominal and used for representative purposes only

Alignment Function		Settings / Special Features
1. Vertical amplitude	V–Amp 27	Optimum setting
2. Vertical position	V–Pos 03	Optimum setting
3. Horizontal centre	H–Ctr 07	Optimum setting
4. Red cutoff	R–Cut 186	Optimum setting
5. Green cutoff	G–Cut 220	Optimum setting
6. Blue cutoff	B–Cut 213	Optimum setting
7. Red drive	R–Drv 46	Optimum setting
8. Blue drive	B–Drv 36	Optimum setting
9. AGC	AGC 33	Optimum setting
10. Sub contrast	S–Con 33	Optimum setting
11. Sub colour	S–Col 39	Optimum setting
12. Sub bright	S–Bri 40	Optimum setting

ADJUSTMENTS

ITEM/PREPARATION	ADJUSTMENT PROCEDURE
<u>B VOLTAGE</u> 1. Operate the TV set. 2. Set controls : Bright minimum Sub Bright minimum Volume minimum Beam Current Zero	1. Confirm the indicated test points for the specified voltage. TPE 1: 9V ± 1V TPE 2: 5V ± 0.3V TPE 3: 12V ± 1V TPE 4: 30V ± 2.5V TPE 5: 5V ± 0.3V TPE 6: 9V ± 0.3V TPE 9: 22V ± 1V TPE 10: 185V ± 10V TPE 11: 12V ± 1V TPE 12: 12V ± 1.5V TPE 13: 125V ± 1.5V TPE 14: 8V ± 1V TPE 18: 8V ± 1V TPE 19: 31V ± 1.5V

SELF CHECK

Self check is used to automatically check the Bus Lines Hexadecimal code of the TV set.

To get into the Self Check mode press the Status button on the Remote Control, followed by the V button on the customer controls at the front of the TV, and the screen will show:—

SCHEMATIC DIAGRAM FOR MODELS

TX-21S3T / TC-21S3R

(Z-7 CHASSIS)

IMPORTANT SAFETY NOTICE

Components identified by  mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

1. RESISTOR

All resistors are carbon 1/4W resistor, unless marked. Unit of resistance is OHM (Ω) (K=1,000, M=1,000,000).

- | | |
|--|---|
|  : Nonflammable |  : Metal Oxide |
|  : Metal Film |  : Fuse |
|  : Wire Wound |  : Solid |

2. CAPACITOR

All capacitors are ceramic 50V capacitors, unless marked as follows: Unit of capacitance is μ F, unless otherwise stated.

- | | |
|--|---|
|  : Temperature Compensation |  : Polyester |
|  : Polypropylene |  : Dipped Tantalum |
|  : Electrolytic |  : Bipolar |
|  : Metallised Polyester |  : Z-Type |

3. COIL

Unit of inductance is μ H, unless otherwise stated.

4. TEST POINT

-  Test Point position

5. EARTH SYMBOL

-  Chassis Earth (COLD)  Line Earth (HOT)

6. VOLTAGE MEASUREMENT

Voltage is measured by a DC voltmeter. Measurement conditions are as follows:

Power source AC 220 / 240V, 50Hz

Receiving Signal Colour Bar signal (RF)

All customer controls. Maximum position

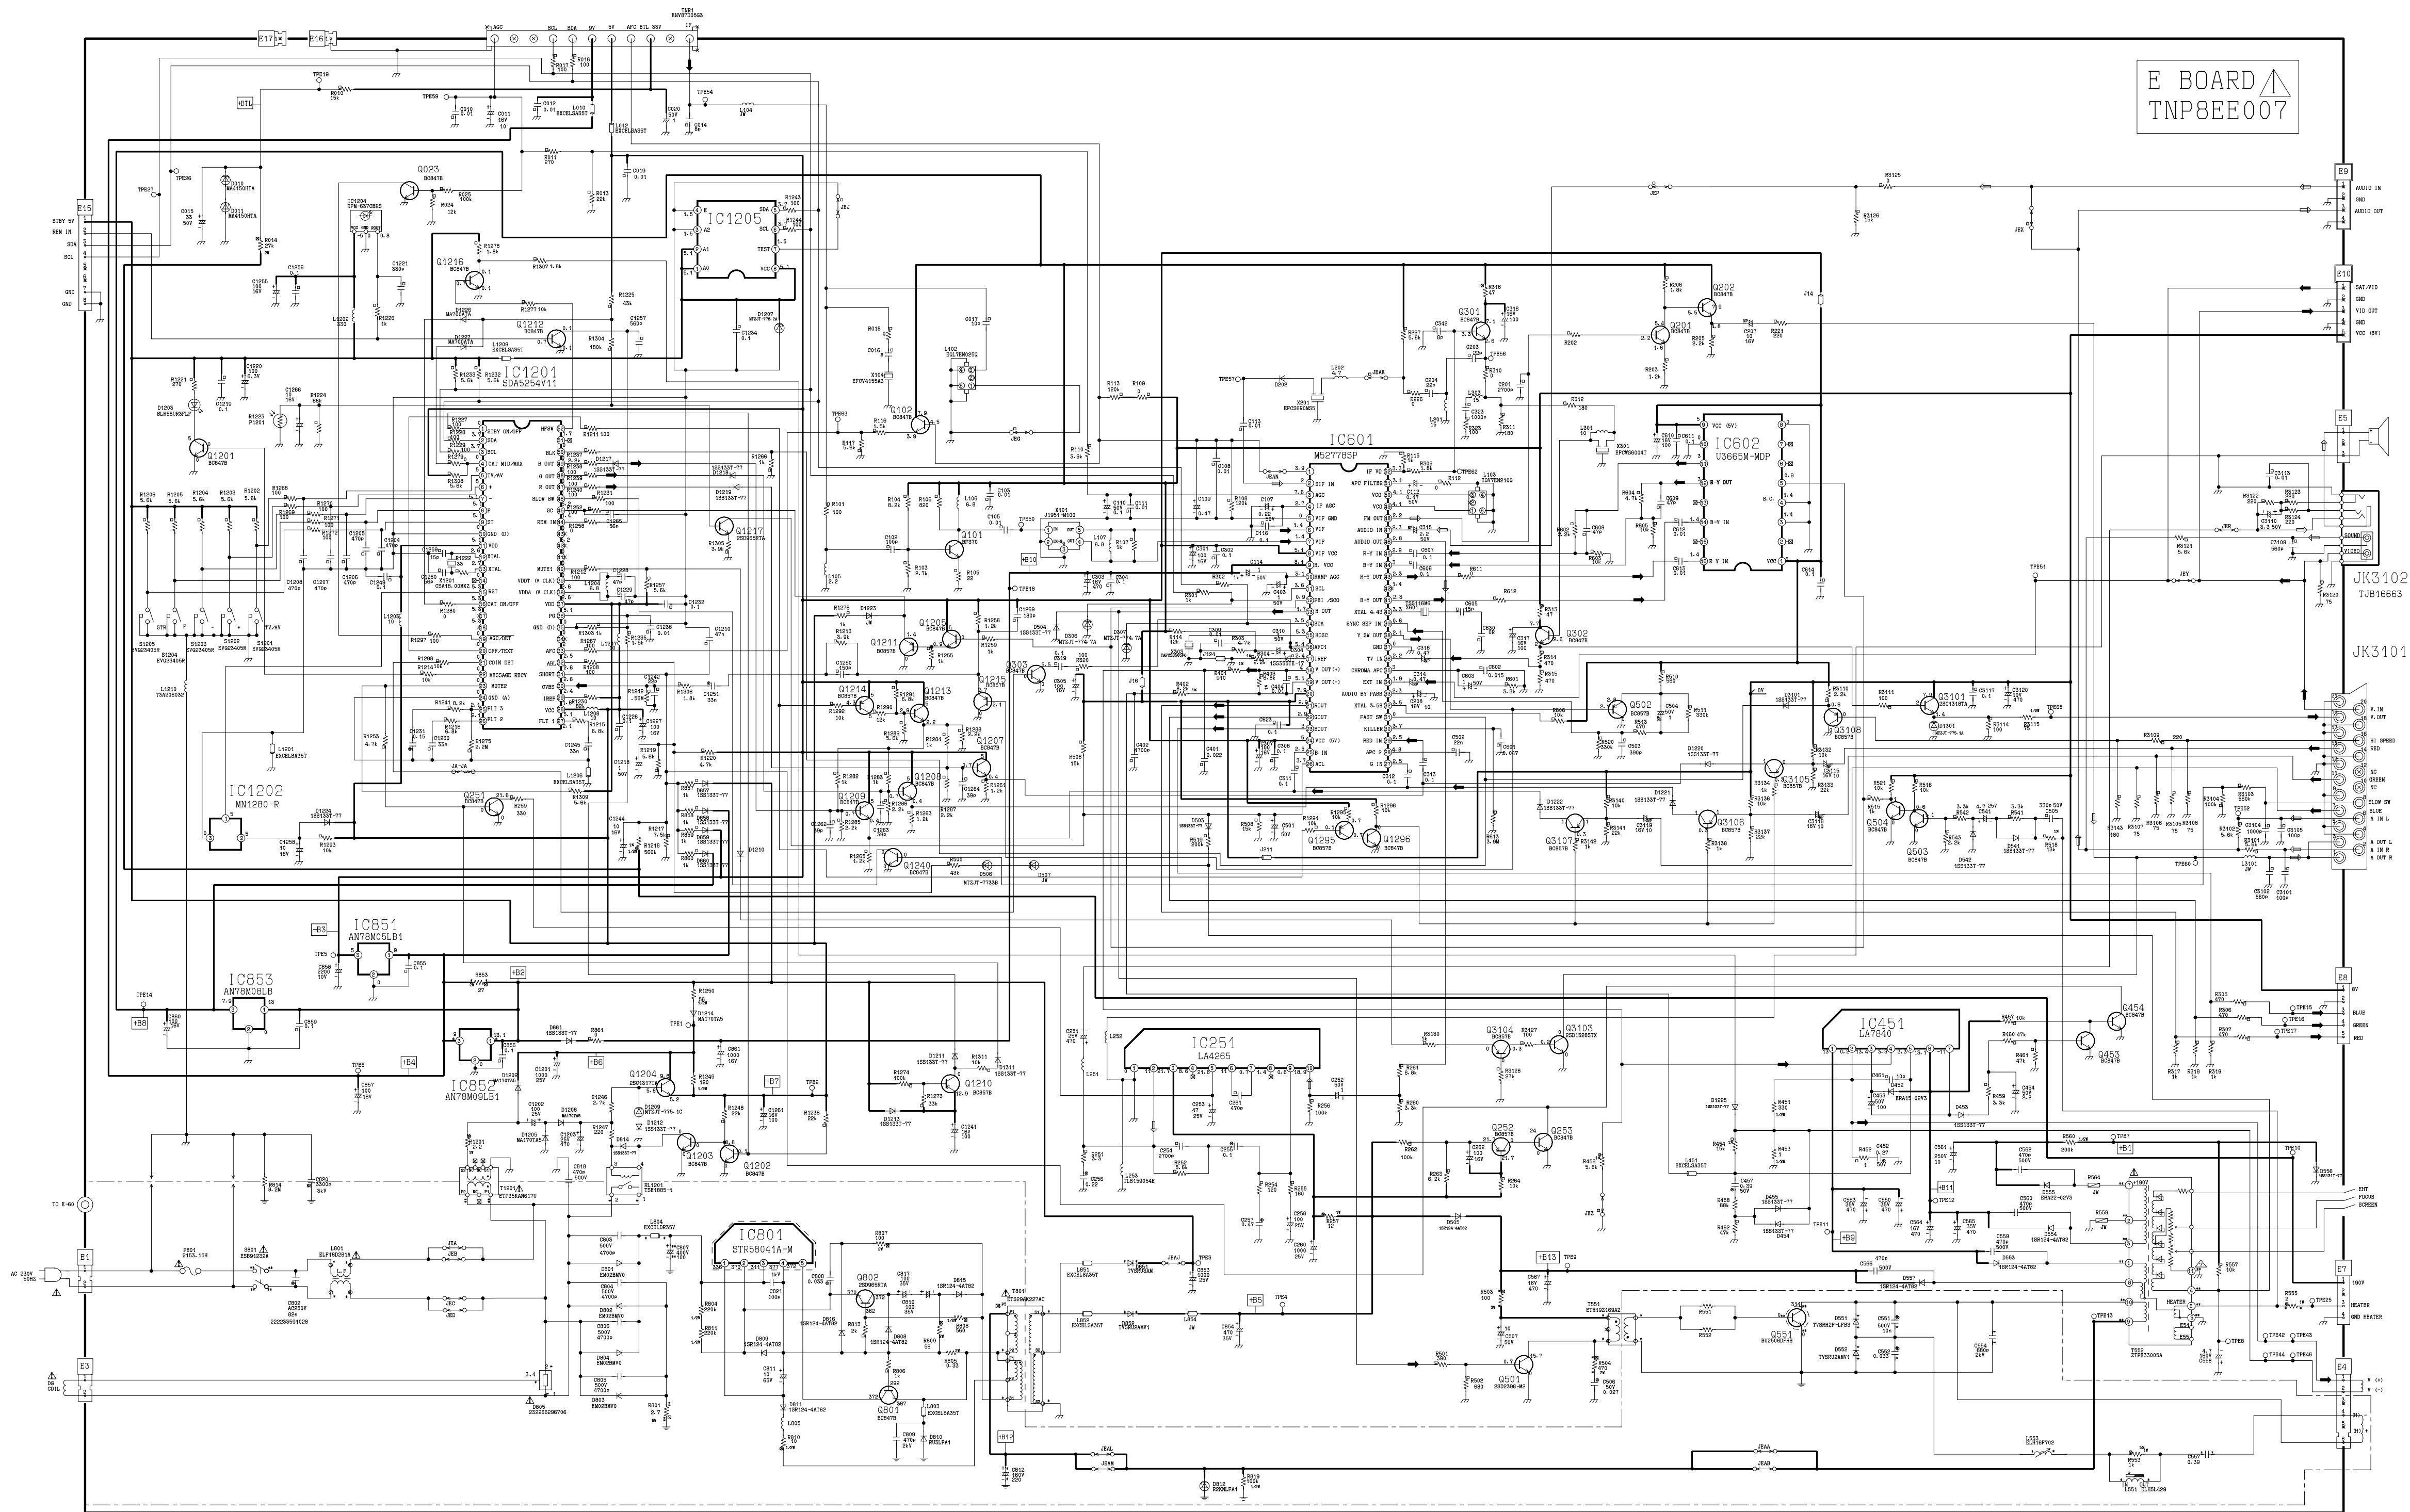

7.  Indicates the Video signal path
-  Indicates the Audio signal path
-  Indicates the Vertical/Horizontal signal path

8. This schematic diagram is the latest at the time of printing and is subject to change without notice.

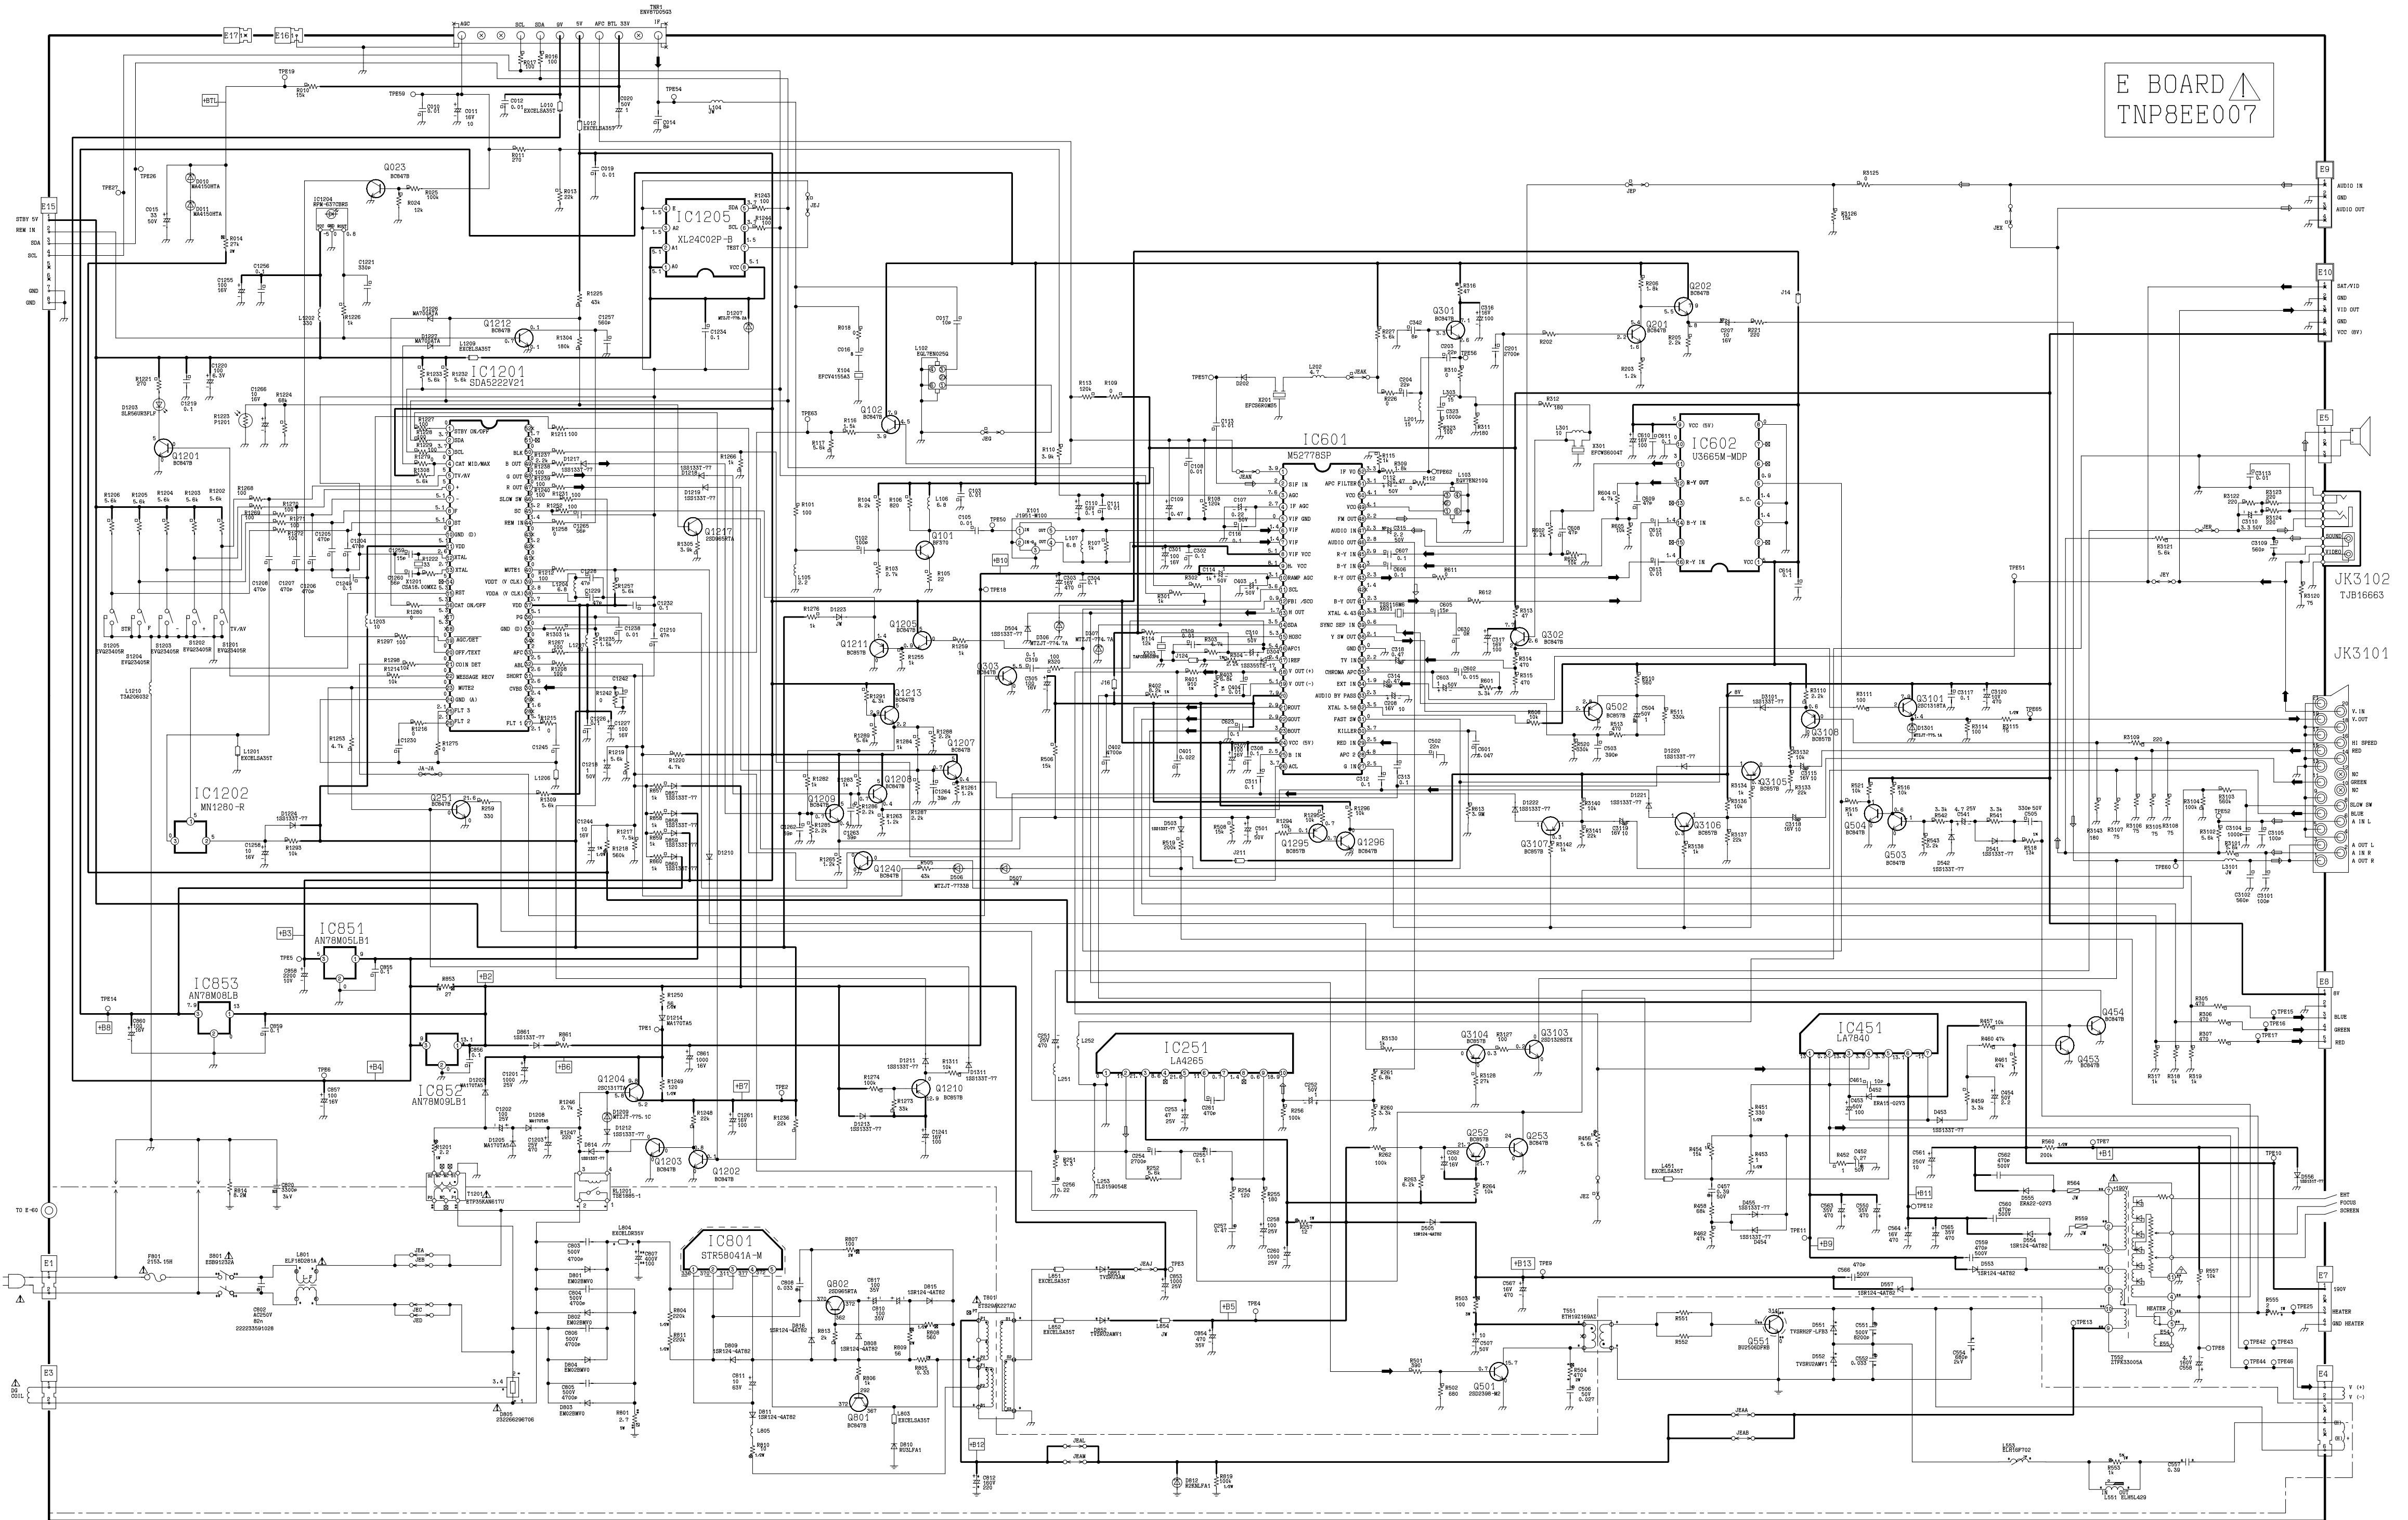

Remarks:

- Care must be taken when servicing this receiver, as it uses a HOT chassis. The circuit is defined by HOT and COLD indications in the schematic diagram. Take the following precautions. All circuits except the Audio, Video input circuits are HOT.
- Precautions**
 - Do not touch the HOT part, or the HOT and COLD parts of the chassis, at the same time, as you are liable to a shock hazard.
 - Do not short-circuit the HOT and COLD circuits as electrical components may be damaged.
 - Do not connect an instrument, such as an oscilloscope, to the HOT and COLD circuits simultaneously, as this may cause fuse failure. Connect the earth of the instruments to the earth connection of the circuit being measured.
 - Make sure to disconnect the power plug before removing the chassis.
